

## PILC: Links With Errors

**Internet-Draft draft-ietf-pilc-error-00.txt**

Spencer Dawkins - sdawkins@nortelnetworks.com

Gabriel Montenegro - gab@sun.com

Markku Kojo - kojo@cs.helsinki.fi

Vincent Magret - vincent.magret@aud.alcatel.com

Nitin Vaidya - vaidya@cs.tamu.edu

## Comments from PILC Mailing List

---

Morten Schläger: Include UDP recommendations

Include recommendations about UDP over links with errors - disagree, because we don't know why UDP was chosen (recommendations about link-layer reliability may affect latency-sensitive apps like voice/video)

Morten Schläger: Tag encrypted packets with flow tags

Tag encrypted packets with flow tags, so encrypted port numbers aren't a problem - leaning toward disagreeing, because this deals with data coming from mobile device. Other direction is a bigger concern

Lloyd Wood et al: Drop/severely qualify FEC/ARQ recommendation

Drop or severely qualify FEQ/ARQ recommendations in section 2.4, taking into consideration satellite links - agree to qualify this recommendation
